

## Catalog Number

68308-05P

**HPLC Column, RP C8 Octyl, 3 $\mu$ m, 4.6mm ID x 50mm Length, 100A.**  
Cogent Brand. 1 EA.

### Additional Info

This Cogent RP C8™ Stationary Phase has been a premium value and used by HPLC laboratories for many years. It is double end capped (*fully*), with traditional bonding of an 8 (*Octyl*) carbon silane to the highest purity silica available, making this column ideal as an Alternate in USP Methods that use the L7 Classification or for new methods.

With a 3 $\mu$ m Particle, this column is more efficient than a 5 $\mu$ m column of the same phase and you will experience sharper peaks. However, due to the smaller particle size, there is an increased back pressure. Used for hydrophobic or neutral compounds in Reversed Phase, this Octyl Phase is excellent for long chain fatty acids.

*This column is often chosen as a scouting column for preparative methods.*
