

CONVENIENCE

Direct Adaptive HPLC Column Connectors

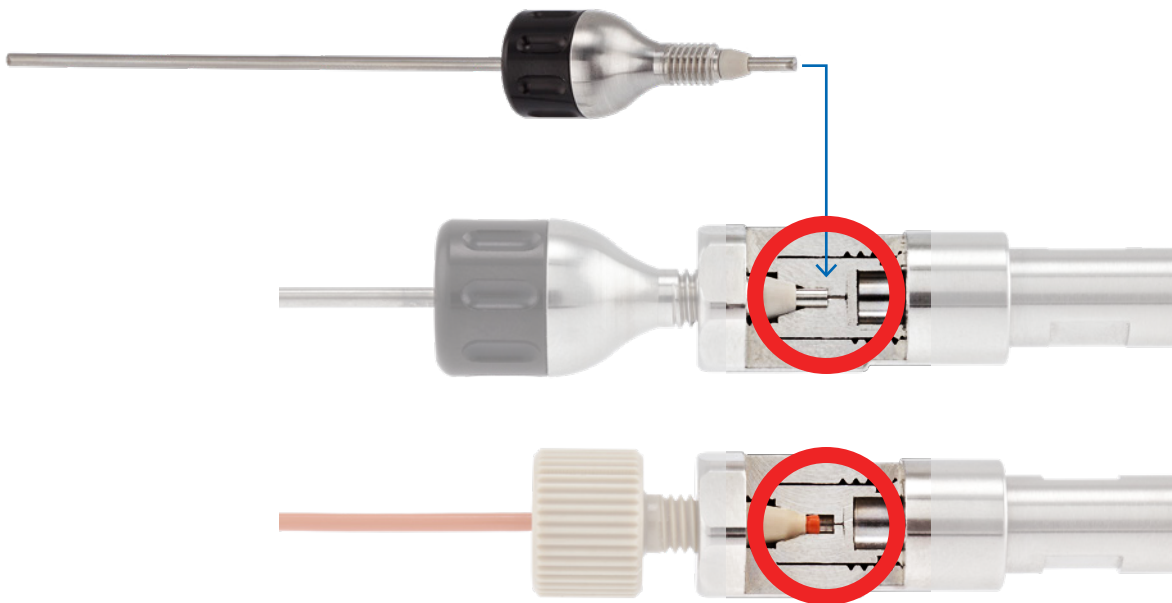

Direct Adaptive (Di-Ad™) HPLC Column Connectors were designed for Speed and Convenience when changing between different column brands on your instrument. They are very easy to use; one can quickly remove and replace columns without tools and the need to cut ferrules and adjust tubing that can ultimately and undesirably affect system volume. The spring-loaded, Di-Ad™ pilot length automatically adjusts to become compatible with any column 10-32 threaded, end-fitting. With a pressure rating up to 10,000 psi.

Using the Direct Adaptive Fittings can be considered a “Best Practice” in HPLC as it is an error-free process that can reduce Peak Broadening from poor connections. The time savings in easily switching columns is a great advantage and the peace of mind that your column and instrument connection will not affect your chromatography.

Di-Ad™ Fittings

Direct Adaptive HPLC
Column Connectors

- » Reduce Peak Tailing from Poor Connections
- » Pressure Rating Stainless Steel Tubing: 10,000 psi
- » Connection with all Brands of Columns is Easy
- » Universal, Self Adapting Pilot Length

Different internal depths can cause band broadening if tubing is not adjusted properly, Di-Ad™ eliminates this.
