

Medroxyprogesterone USP Assay with HPLC – AppNote

Alternate L1 column used for a USP assay of Medroxyprogesterone

This USP Medroxyprogesterone is easily performed, and the 10 injections overlay below demonstrates run-to-run consistency and great peak symmetry. The peak efficiency is very good and peak tailing guidelines are easily met with RSD values of less than 1.0%.

This demonstrates a good alternate column for your Medroxyprogesterone USP method.

Peak:

Medroxyprogesterone

Method Conditions:

Column: Cogent MicroBee C18™, 5 µm, 100 Å

Catalog No.: [59305-03](#)

Dimensions: 3.9 x 300 mm

Note 1: For the full method conditions and details, consult the official United States Pharmacopeia–National Formulary (USP–NF.)

Note 2: Medroxyprogesterone is a type of female hormone (progestin) and is used to prevent endometrial hyperplasia (thickening of the lining of the uterus or womb) in women who are taking conjugated estrogens.
