

## Does MICROSOLV Have an Equivalent to the Waters Total Recovery Autosampler Vial? - FAQ

Date: 10-NOVEMBER-2023 Last Updated: 27-OCTOBER-2025

The MICROSOLV MRQ™ vials are designed for the same autosamplers as the Waters© Total Recovery Vial. However, this is not an exact match. The Total Recovery Vial is indicated for use when the HPLC or GC autosampler has an injection needle with a side port. The MICROSOLV™ MRQ vials are made for when the autosampler has an injection needle with a bottom inlet or port.

The MRQ vials hold a little more liquid and have additional headspace. Both vials have the same style Well for maximum recovery of sample, both have the exact same 12 x 32 mm outer dimensions and screw threads, that are 9-425 mm. Both vials work very well with our caps. The base of the MRQ vial is a bit more stable due to its wider platform, however it fits perfectly into autosampler wells.

Click [HERE](#) to view more details on the MRQ vials.

*Below is a "rough" photograph for comparison purposes only, of both the Total Recovery Vial (TRV) and an MRQ Vial. Note that the MRQ Vial has a larger total volume and a smaller bottom well. The TRV has a longer well and terminates much lower in the vial than the MRQ.*
