

Proline: Trans-4-Hydroxy-L-Proline by LCMS - AppNote

Rapid, High Efficiency Method by LCMS

This method is highly specific, efficient and fast for the analysis detection, small volumes of the reaction mixture can be injected and of *trans*-4-hydroxy-L-proline. Due to the high specificity of the the amount of the produced compound can be determined. No derivatization is required for the detection of this important compound.

Peak:

Trans-4-Hydroxy-L-Proline 132.0655 m/z (M + H)+

Method Conditions

Column: Cogent Diamond Hydride™, 4µm, 100Å

Catalog No.: <u>70000-05P-2</u> **Dimensions:** 2.1 x 50mm

Mobile Phase:

A: 50% Methanol / 50% DI Water / 0.05% Acetic Acid B: 97% Acetonitrile / 3% DI Water / 0.05% Acetic Acid

Gradient:

Time (minutes)	%B
0	95
10	30
11	30

12 95

Post Time: 5 minutes Flow rate: 0.4 mL / minute

Detection: ESI – POS - Agilent 6210 MSD TOF Mass Spectrometer

Injection vol.: 1µL Sample Preparation:

Stock Solution: 1 mg / mL in Methanol diluent.

Working Solution: Stock aliquot was diluted using 50% Solvent A and 50% Solvent B mixture for the final concentration 0.5 mg / L. Before injection, solution was filtered using a 0.45μm Nylon Syringe Filter (MICROSOLV Tech Corp.).

Note: Isomers of Hydroxyproline have been found in nature. Trans-4-Hydroxy-L-Proline is the major component of Collagen, Gelatin, plant wall Proteins, etc. It is a useful material for synthesis of pharmaceuticals such as Angiotensin converting enzyme inhibitors and Carbapenem antibiotics.
