

Safety Data Sheets for the Qualification Kit Solutions - Tech Information

Date: 7-May-2012 Updated 5-JULY-2025

Safety Data Sheets (SDS) are available for all solutions included in the HSQ (High Sensitivity Qualification) and PQ (Performance Qualification) Kits™.

These SDS documents are essential for laboratories performing in-house HPLC system qualification, especially in regulated environments where documentation of chemical handling and safety compliance is required.

How to Access SDS Documents

- SDS files are available for immediate download from our website:

 <http://www.mtc-usa.com/msds.asp>

- You'll find SDS for:
 - Caffeine solution
 - Holmium oxide solution
 - Uracil and other PQ/HSQ standards
 - Any additional reagents included in your kit

Why SDS Are Important for DIY HPLC Qualification

- Regulatory compliance: Required for audits, GLP/GMP documentation, and ISO accreditation.
- Lab safety: Helps ensure proper handling, storage, and disposal of qualification solutions.
- Training: Useful for onboarding new lab personnel or validating internal SOPs.

Tip for DIY Qualification Users

If you're qualifying your HPLC system yourself, make sure to:

- Keep printed or digital SDS copies accessible in your lab.
- Review expiration dates and storage conditions for each solution.
- Document each qualification run with traceable lot numbers and SDS references.
