

How do I validate the Excel Files that come with the Chemical Solutions Qualification Kits - FAQ

Date: 1-JANUARY-2015 Last Updated: 05-DEC-2025

There is no need for the end-user to perform any validation of Chemical Solutions Qualification Kits™ Excel® spreadsheet.

The document is fully validated. A certificate of validation by the company that validated it can be provided upon request if needed (*see below for attached document*). The scope of the validation encompasses the design of the spreadsheet, that its calculations are accurate and perform as intended.

This of course assumes that the end-user's input values themselves are accurate. The spreadsheet is also password-protected against altering of cell calculations and its validation demonstrates this. If the password is used to alter any cell, then the validation is considered void.
